[z/OS Distributed File Service zSeries File System Implementation z/OS V1R13](#) Paul Rogers
2012-10-18 The z/OS® Distributed File Service zSeries® File System (zFS) is a z/OS UNIX® file system that can be used like the Hierarchical File System

(HFS). zFS file systems contain files and directories, including Access Control Lists (ACLs), that can be accessed with the z/OS HFS application programming interfaces (APIs). zFS file systems can be mounted into the z/OS UNIX hierarchy along with other local

or remote file system types (for example, HFS, TFS, AUTOMNT, NFS, and so on). zFS does not replace HFS, but it is the z/OS UNIX strategic file system and IBM® recommends migrating HFS file systems to zFS. Beginning with z/OS V1R7, there are no restrictions for file system structures that should be kept as HFS instead of zFS. This IBM Redbooks® publication helps you to install, tailor, and configure new zFS file systems. This information can be used by system administrators who work with the zFS component of the IBM z/OS Distributed File Service base element. The book provides a broad description of the new architecture of the zFS file system for all releases up to zFS V1R13. You can use it as a reference when converting HFS file

systems to zFS file systems. It will help you to create a solution for migrating to zFS file systems, and to understand the performance differences between HFS file systems and zFS file systems.

Performance of Neutral File Data Transfers

Raymond J. Goult

1990-11-07 This book is concerned with problems and solutions associated with the exchange of data between different computer aided design, engineering and manufacturing (CAx) systems. After an analysis of the current problems a new strategy consisting of a test methodology, check software and tools for the improvement of the data exchange process are discussed. The particular problems associated with the transfer of curve and surface data are expanded upon and new methods to overcome them presented. With all these tools a system-specific adaptation of neutral files is made possible. Thus the integration of several incompatible CAx systems within devel-

production processes can be effectively improved. In order to exclude incorrect data a new methodology for neutral file processor tests has been worked out.

Finally, the benefits resulting from this new strategy are shown by the example of data transfer not only between CAX systems but also between consecutive production processes.

scenarios sound familiar to you? You've downloaded an attachment from your e-mail, but aren't sure where you downloaded it to. You spent an entire evening working on a document only to discover the next morning that you didn't save it to your flash drive like you thought you had? Maybe you had a guest visiting and wanted to share with them the pictures you took of your kids recital, yet when you went to get them you were unable to recall where you stored them on your PC. Or you scanned your receipts for your expense reports on day and came back the next day and scanned some for another report only to find that the new ones numbered Scan 1, Scan 2,... still exist. Unfortunately, for a vast number of PC users, scenarios like these are all too common. These

situations are not only extremely frustrating for the user, but also tend to discourage them from ever wanting to touch a PC again! Why is that? What is the common factor? It's simple really. Each of these issues can be attributed to poor file management skills. In my experience, the people with the worst file management skills are simply the ones that lack an understanding of how to navigate the Windows operating system. However this situation can be easily rectified. And once you can successfully navigate your computer's drive and folder structure, you'll be hard pressed to misplace anything. Although this process can seem daunting to the uninitiated, this isn't black magic. In fact, it's actually quite simple. Keep ~~your~~ ~~data~~ ~~organized~~ ~~from~~
